

UCF Physics: AST 5765/4762: (Advanced) Astronomical Data Analysis Survey
Homework 1 : setting up your laptop
Due Monday Aug 31, 2:30pm.

This homework ensures that you have everything installed and are ready to start using the Unix terminal, Python and GitHub for this class.

1. **(5 points)** Make a folder `hw1_<yourname>/` under your `ast4762` homework folder. Remember to open your `0-ast4762-yourname.log` and start logging what you are doing!

2. **(6 points total)**. We first need to verify that you have downloaded Anaconda and Git/GitHub and are ready for the next classes.

- **(3 points)** Start Jupyter -- or if you chose to use Spyder (or terminal+emacs, VSCode,...), start Spyder (terminal+emacs, VSCode,...)-- and take a screenshot. Rename the screenshot as instructed in the `Files/handouts/Workflow_and_formatting_rules/homework_format_rules_25.pdf` and add it to your `hw1_<yourname>` folder. Use the screenshot functionality of your operating system rather than taking a photograph, if you can. In any case, in your log explain how you took the screenshot. What is your Python version? Write it in your log.
- **(3 points)** Start the GitHub Desktop app. Make a screenshot of your GitHub Desktop. Name it appropriately. Add the screenshot to your `hw1_<yourname>` folder.
 - If you have opted to use Git, navigate to your `ast4762` folder and type `git status`. Make a screenshot of the terminal and its output. Name it appropriately. Add the screenshot to your `hw1_<yourname>` folder.

3. **(4 points)** We finally need to verify that you have access to the command line and Stokes. Start a terminal (Unix, Mac) or start a session on MobaXTerm. Connect to Stokes. Then type `ls` (we will see what this means soon). Make a screenshot that shows your terminal and the output. Name it appropriately. Add the screenshot to your `hw1_<yourname>` folder.

4. **(5 points)** Explain how you will do the following steps in your log:

- copy your log file in your `hw1_<yourname>/` folder.
- zip the `hw1_<yourname>/` folder.
- submit the zip file to Webcourses.

Then, close your log entry (with "*****OUT: " and the date). Copy your log file in your `hw1_<yourname>/` folder. Zip the `hw1_<yourname>/` folder and submit to Webcourses.
